Cover: Cytoplasmic tail of human coronavirus OC-43 and SARS spike protein has differential intracellular localization signal: HeLa cells transfected with OC-43 and SARS spike protein (Green-YFP) showed partial colocalization with endoplasmic reticulum Golgi intermediate compartment (ERGIC) marker  $\beta$ -Cop (Red). Red fluorescence shows ERGIC compartment, green fluorescence shows endogenous expression of OC-43 or SARS spike protein and yellow fluorescence shows overlap which symbolizes colocalization of spike protein (YFP) with ERGIC marker  $\beta$ -Cop (Red).
