Vol. 43, No. 4, September 2018

CONTENTS

Articles

- Various responses of male pituitary–gonadal axis to different intensities of long-term exercise: Role of expression of *KNDY*-related genes
Nazli Khajehnasiri, Homayoun Khazali and Farzam Sheikhzadeh 569–574
- Complex interplay of lesion-specific DNA repair enzyme on bistranded clustered DNA damage harboring Tg:G mismatch in nucleosome core particles
Bhavini Kumari, Kislay K Sinha and Prolay Das 575–583
- Evaluation of metabolic changes induced by polyphenols in the crayfish *Astacus leptodactylus* by metabolomics using Fourier transformed infrared spectroscopy
Maria Grazia Volpe, Susan Costantini, Elena Coccia, Lucia Parrillo and Marina Paolucci 585–596
- PE-only/PE_PGRS proteins of *Mycobacterium tuberculosis* contain a conserved tetra-peptide sequence DEVS/DXXS that is a potential caspase-3 cleavage motif
Nandita Bachhawat 597–604
- Functional characterisation of *romeharsha* and *clint1* reaffirms the link between plasma membrane homeostasis, cell size maintenance and tissue homeostasis in developing zebrafish epidermis
Mandar Phatak and Mahendra Sonawane 605–619
- Little imaginal discs, a Trithorax group member, is a constituent of nuclear matrix of *Drosophila melanogaster* embryos
Parul Varma and Rakesh K Mishra 621–633
- An exploration of microbial and associated functional diversity in the OMZ and non-OMZ areas in the Bay of Bengal
Shriram N Rajpathak, Roumik Banerjee, Pawan G Mishra, Asmita M Khedkar, Yugandhara M Patil, Suraj R Joshi and Deepti D Deobagkar 635–648

(Continued on inside back cover)

Cover: Moth *Chiasmia elenora* on a jasmine plant in the early morning.
(See article by S Ghosh and M Mishra, pp 673–684.)
