TRANSFER OPERATION - II (BIOT 3104)

Time Allotted : 3 hrs

Figures out of the right margin indicate full marks.

Candidates are required to answer Group A and <u>any 5 (five)</u> from Group B to E, taking <u>at least one</u> from each group.

Candidates are required to give answer in their own words as far as practicable.

Group – A (Multiple Choice Type Questions)

- 1. Choose the correct alternative for the following:
 - (i) Which of the following is not a membrane separation process?
 (a) Ultra-filtration
 (b) Chromatography
 (c) Flash distillation
 (d) Reverse osmosis.
 - (ii) Molecular diffusivity of a liquid
 - (a) increases with temperature
 - (b) decreases with temperature
 - (c) may increase or decrease with temperature
 - (d) is independent of temperature.

(iii) Concentration polarization does not occur in which of the following processes

- (a) Reverse osmosis
- (c) Micro-filtration

- (b) Ultra-filtration
- (d) Electrophoresis.
- (iv) In absorption minimum operating line
 - (a) touches the equilibrium line
 - (b) has a slope of $(L/V)_{min}$
 - (c) shows the maximum possible liquid concentration
 - (d) all the above.
- (v) Which of the following is not an application of ultrafiltration?(a) Concentration(b) Purification(c) Diafiltration

Full Marks: 70

 $10 \times 1 = 10$

(d) Dialysis.

(vi) What apparatus is used in distillation?

- (a) Distillation flask, condenser, collection vessel
- (b) Distillation flask, condenser
- (c) Condenser, collection vessel
- (d) Distillation flask, column.
- (vii) When the boiling temperature is plotted against the liquid composition, then it is called
 (a) Cooling Curve
 (b) Heating Curve
 (c) Bubble point curve
 (d) Volatility Phase Diagram

B.TECH/BT/5TH SEM/BIOT 3104/2022

- (viii) For fixing the effective drying conditions, which processing factor is essential?(a) Humidity(b) Pressure(c) Temperature(d) All the above.
- (ix) What is VLE?
 - (a) Vapor Liquid Equal
 - (c) Vapor Liquid Estimation
- (b) Vapor Liquid Equilibrium(d) Vapor Liquid Enthalpy.
- (x) What is meant by crystallization?
 - (a) Concentration of atoms into a highly structured form
 - (b) Solidification of atoms into a highly structured form
 - (c) Solidification of solution
 - (d) Concentration of solution.

Group-B

- 2. (a) The diffusivity of benzene in air is measured by Stefan's method. A vertical glass tube is filled with benzene to a depth of 20 mm from the top open end. It took 190 h for the level to fall to 80 mm from the top. The temperature and pressure are maintained at 298 K and 100 KPa. Density of liquid benzene is 875 kh/m³ and the vapour pressure of benzene is 12.6 KPa at 298 K. Calculate the diffusivity of benzene in air at 298 K. [(CO1)(Calculate/IOCQ)]
 - (b) Prove that $D_{AB} = D_{BA}$.

- [(CO1)(Calculate/IOCQ)][(CO1)(Understand/LOCQ)]7 + 5 = 12
- 3. A tray tower is to be designed to absorb SO_2 from an air stream by using pure water at 293 K. The entering gas contains 20 mol% SO_2 and that leaving 2 mol% at a total pressure of 101.3 kPa. The inert air flow rate is 150 kg air/h.m², and the entering water flow rate is 6000 kg water/h.m². Assuming an overall tray efficiency of 25%, how many theoretical trays are needed? What should be the number of trays actually to be employed? Assume the tower to operate at 293 K and equilibrium relationship is given by y^{*}= 20x.

```
[(CO2)(Calculate/LOCQ)] 12
```

Group - C

4. A 70 kmol methanol–water mixture containing 42 mol% methanol is flash distilled at atmospheric pressure to yield a residue of 27 mol% methanol. What is the composition of the distillate and what are the flow rates of the distillate and residue?

The equilibrium data for the given set of problem is:

	X	0.0084	0.0258	0.068	0.137	0.24	0.48	0.57	0.74	
	у	0.103	0.227	0.391	0.568	0.68	0.79	0.82	0.90	
[(CO3)(Calculate/H									e/HOC	

- 5. (a) Describe the principle of flash distillation. [(CO3)(Remember/IOCQ)]
 (b) Describe in details vapour liquid equilibrium curve of a liquid-liquid mixture when heated at different temperature. Assume that the liquids have appreciable difference in their volatility. [(CO3)(Analyze/IOCQ)]
 - 6 + 6 = 12

12

Group - D

- 6. (a) Derive the working formula for calculation of drying time under constant rate of drying. [(CO5)(Derive/IOCQ)]
 - (b) Describe the different stages of crystal formation from a super saturated solution. [(CO4)(Understand/LOCQ)]

6 + 6 = 12

7. An inlet water solution of 100 kg/hr containing 0.01 wt fraction nicotine (A) in water is stripped with kerosene stream of 200 kg/hr containing 0.0005 wt fraction nicotine in a counter current stage tower. The water and the kerosene are essentially immiscible in each other. It is desired to reduce the concentration of exit water to 0.001 wt fraction nicotine. Determine the theoretical number of stages needed. The equilibrium data are as follows with x the weight fraction of nicotine in the water solution and y in the kerosene.

X	0.001010	0.00246	0.005	0.00746	0.00988	0.0202
y	0.000806	0.00196	0.00454	0.00682	0.00904	0.0185

[(CO5)(Solve/HOCQ)] 12

Group - E

- 8. In a cross flow ultra filtration system for separation of protein from the fermentation broth, the flow rate of liquid through a tube of diameter d = 2 cm and length L = 50 cm is Q = 2 L/min. The flow regime is turbulent, f = 0.0005, and $C_4 = 2[atm(s/cm)^2]$. The inlet pressure is $P_i = 2$ atm. Protein concentration in the solution and on gel film are $C_B = 30$ mg/L and $C_G = 100$ mg/L, respectively. Determine:
 - (i) The transmembrane pressure drop.
 - (ii) If the mass transfer coefficient (k) for protein flux is k = 5 cm/s, determine the flux of liquid through the UF membrane.
 [(CO6)(Analyse/IOCQ)]

(6+6) = 12

- 9. (a) What are the working principles of ultra-filtration, electrodialysis and reverse osmosis? [(CO6)(Understand/LOCQ)]
 - (b) Where can you apply the above unit operations in the field of biotechnology?

```
[(CO6)(Analyse/IOCQ)]
```

Cognition Level	LOCQ	IOCQ	HOCQ
Percentage distribution	30.21	44.79	25

3

Course Outcome (CO):

After completion of the course, the students will be able to:

- 1. Understand the concept of diffusion and diffusivity and identify the type of diffusion in a given problem and solve it.
- 2. Determine gas-liquid mass transfer coefficient in a wetted wall column or packed bed absorption column and calculate the number of stages required for the unit operation.
- 3. Apply McCabe-Thiele Method and Rayleigh's equation as required in a distillation process.
- 4. Comprehend different other unit operations like adsorption, liquid-liquid extraction and crystallization explicitly.
- 5. Draw the drying characteristic curve under a given constant drying condition.
- 6. Study and apply the principle and operation of different advanced separation processes like dialysis, ultrafiltration, reverse osmosis, pervaporation and electrodialysis in the field of biotechnology.
